EDUCATION

The National Institute of Engineering

B.E. Information Science Engineering – CGPA: 8.4/10.0

2022 – Present

Mysuru, India

EXPERIENCE

Research Intern – VISTA Lab (Advisor: Dr. Punit Rathore)

Mar 2026 – Present

Indian Institute of Science (IISc)

Bangalore, India

- Investigated online and offline multi-object tracking methods for traffic surveillance, implementing and evaluating multiple tracking algorithms to understand identity preservation, track association, and failure modes in real-world CCTV data.
- Contributing to an in-house traffic analytics platform at IISc, testing detection and tracking pipelines, debugging model failures, and making incremental improvements to enhance tracking consistency and system reliability.
- **Certificate:** Ongoing

Research Intern – Deep Learning and Computer Vision Lab (Advisor: Dr. Shyam Lal)

July 2025 – February 2026

National Institute of Technology Karnataka (NITK)

Surathkal, India

- Conducted dual-domain deep learning research in Remote Sensing and Medical Imaging.
- Developed a controlled benchmarking framework for high-resolution building change detection on LEVIR-CD and EGY-BCD datasets, managing preprocessing for 6,000+ image pairs.
- Evaluated 8 widely used change detection architectures under a standardized evaluation framework to build consistent performance baselines.
- **Certificate:** [View](#)

Deep Learning Intern

Apr 2025 – May 2025

AIQuantum Smart Solutions Pvt. Ltd., NITK STEP Incubator

Remote

- Implemented attention-augmented U-Net variants for road segmentation on aerial satellite imagery.
- Reimplemented convolution, pooling, and activation layers from scratch in NumPy to validate gradient propagation and numerical stability against framework outputs.
- **Certificate:** [View](#)

PROJECTS

Histopathological Cancer Classification (Colon & Prostate) | TensorFlow, Keras, NumPy, OpenCV | [GitHub](#)

2026

- Reproduced and benchmarked multiple state-of-the-art CNN architectures for histopathology classification across colon and prostate cancer datasets.
- Conducted controlled cross-architecture evaluation using accuracy, F1-score, precision, recall, and generalization gap analysis.
- Analyzed contextual channel attention and gating mechanisms (e.g., ASPP, shared residual channel blocks) underlying existing histopathology networks.
- Designing a lightweight CNN architecture targeting improved efficiency and generalization over existing models.

Bi-Temporal Change Detection Research Framework (EBCDNet Study) | TensorFlow, NumPy | [GitHub](#)

2025

- Engineered **EBCDNet**, achieving $\sim 1.5\text{--}2\%$ IoU improvement over existing models while maintaining faster inference speeds through optimized feature fusion.
- Conducted quantitative error analysis on extreme class imbalance ($< 5\%$ foreground pixels), identifying and mitigating failure modes in boundary localization.
- Developed modular experimental scripts to validate model generalization across regional benchmarks, evaluating performance on the LEVIR-CD (US) and EGY-BCD (Egypt) datasets.

PLANTEFY: Plant Species Recognition | TensorFlow, OpenCV, Android | [GitHub](#)

2024

- Designed sequential and skip-connected CNN architectures for plant species classification.
- Optimized preprocessing and deployed a lightweight Android application for real-time inference.

Road Segmentation using Deep Learning | TensorFlow, OpenCV | [GitHub](#)

2025

- Implemented attention-enhanced U-Net for aerial road segmentation with modular loss and augmentation strategies.
- Improved IoU and F1-score over baseline U-Net through controlled architectural experimentation.

TECHNICAL SKILLS

Programming Languages: C, Java, Python, C++, Matlab

Databases: MongoDB, MySQL

Tools: Git, GitHub, Postman, Canva

Libraries/Frameworks: OpenCV, NumPy, Pandas, TensorFlow, PyTorch

INTERESTS

- Machine Learning and Deep Learning
- Quantum Computing
- Recreational mathematics (Euclidean geometry)
